

Appraisal Flow: Update Report

Balanced Scorecard and KPI Definition | 28 September 2026

1. Summary of Changes

The table below lists the changes required across the appraisal flow.

#	Area	Change required
1	Button hierarchy	Button operations should follow one another in a logical order. All actions (Import, Apply, etc.) must look like buttons, not tags.
2	Designer header	Perspective, Indicator and Publish Scorecard look like tags. Restyle as buttons. A column for (Perspective, Indicator) is created automatically when a scorecard is created.
3	Error handling	Errors for creating a scorecard and setting a perspective show under the form input where the action happens, not across the right sidebar. This frees space for the scorecard.
4	Setup order	Rubric and KPI definition setup must follow a clear order so users do not have to guess their way through the application.
5	KPI Definition	Remove the Category input and the Value input.

2. Detailed Notes

Button hierarchy

- Button operations should follow one another in a logical order.
- Import, Apply and all other actions must be styled as buttons.

Scorecard Designer header

- Perspective, Indicator and Publish Scorecard currently look like tags. Restyle them as buttons.
- Creating a scorecard should automatically create a column for the (Perspective, Indicator).

Error handling

- Errors for creating a scorecard and setting a perspective appear under the form input where the action is taken.
- They must not take over the right sidebar, so more space is available for the scorecard.

KPI Definition

- Remove the Category input.
- Remove the Value input.

3. Proposed Flow

1. **KPI Definition.** Click KPI to open the KPI Definition page.
2. **Enter KPI details.** Enter Name and Description, and select a Parent if it applies.
3. **Balanced Scorecards.** Click Balanced Scorecards. The items to set up appear as an ordered list.

Ordered setup items

- **Rubrics (first).** Increase the width of the section. Show a pop-up notification after successful creation and keep the user on the same page.
- **Designer (second).** Restyle Perspective, Indicator and Publish Scorecard as buttons. Auto-create the (Perspective, Indicator) column when a scorecard is created. Show errors under the form input, not across the right sidebar.
- **Import, Apply and other items.** Follow the same rule: all actions are indicated as buttons.
